

Cor App Summary

One-page repo-based overview generated from **index.html**, **website-handoff-v1.md**, and **CLAUDE.md**.

What it is

A static one-page website for Cor, presented as a formal specification of human motivational-emotional architecture and its relevance to AI alignment. The page packages the project pitch, evidence base, roadmap, core documents, and contact details into a single landing page.

Who it's for

Primary persona: grant reviewers, fiscal sponsors, alignment researchers, and adjacent AI safety audiences evaluating Cor as open infrastructure.

What it does

- Explains the core argument that human preferences are mechanism outputs, not ground truth for alignment.
- Presents the formal structure of the specification: OF1, P1-P3, DA1-DA7, and DC1-DC2.
- Shows the evidence base with counts, research-domain coverage, quality grades, and convergences.
- Loads a technology degradation matrix from **technology_degradation_matrix.json** and reveals mechanism details on click.
- Includes example decodes, a ten-sentence project summary, roadmap, team section, and contact CTA.
- Links supporting repo documents including **bridge-paper-v2.md** and **constitutional-draft-v5.md**.

How it works

Frontend: Single static **index.html** contains the page structure, copy, styles, and browser-side behavior.

External services/assets: Google Fonts plus GSAP and ScrollTrigger loaded from CDN.

Local data/content: Browser fetches **technology_degradation_matrix.json**; document links point to local Markdown files.

Data flow: Browser loads HTML -> fetches fonts/scripts -> initializes scroll/counter interactions -> fetches matrix JSON -> click handlers populate the detail panel.

Backend, auth, persistence, tests, build pipeline: Not found in repo.

How to run

1. Start a simple local HTTP server from the repo root because the page fetches **technology_degradation_matrix.json**.
2. Open **http://localhost:8000/index.html** in a browser.
3. Minimal command:

```
python3 -m http.server 8000
```

4. Package manager, build config, and dedicated run script: Not found in repo.

Notes: summary claims are limited to repo evidence. Missing operational details are marked explicitly instead of inferred.
